Sat, 10 Nov 2018 03:18:00 GMT alignment test of lathe machine pdf - The accuracy of the threads cut on any machine depends upon the accuracy of its lead screw. Thus it is very essential that pitch of the lead screw throughout its length be uniform. Test for this is performed by fixing a positive stop on the lathe bed. Against the stop, the length bars and slip gauges can be located. Tue, 05 Apr 2016 23:58:00 GMT Alignment Tests on Lathe (Metrology) - what-when-how - lathes have the bed at an angle across the machine, which facilitates chip flow away from the work, and I have seen a lathe design in which the axis was up at about 30 deg., with the headstock at the high end, and the operator in effect sitting on the tailstock. There is no magic in $\hat{\alpha}$ except that it is by far the easiest angle to reproduce. Wed, 07 Nov 2018 00:15:00 GMT IN THE WORKSHOP are not the only means, and I have stuck ... - For this test the dial gauge is fixed to the spindle. Feeler is directed upon the surface the machine table and latter moved longitudinally. The deviations from parallelism between the table surface and longitudinal motion are noted down. If the table is uneven, a straight edge may be placed on the surface. Thu, 25 Oct 2018 20:26:00 GMT Alignment Tests on Milling Machine
