Satellite Motion Circular Orbit Answers - The motion of a projectile can be studied by splitting it into two components: horizontal motion and vertical motion. Assume the projectile starts from a point O. Using horizontal and vertical axes through O allows the position of the projectile at any point in its motion to be given in terms of two coordinates (x, y) .
Projectile problems - Nuffield Foundation - Lab#3 "2D Kinematics Where $v_y(0)$ and $v_x(0)$ are the initial vertical and horizontal components of the velocity respectively. Notice that Equations 1 and 2 have a common variable, t . Equation 1 predicts the x coordinate in terms of the parameter t , Equation 2 predicts the y coordinate in terms of the parameter, t . By combining these two equations, Lab #3: 2-Dimensional Kinematics Projectile Motion -
